CONNECTEDTEXT CHEAT SHEET

Paragraph formatting:

This is a paragraph, which is text surrounded by whitespace. Paragraphs can be on one
line (or many).

An indented paragraph (or block quote) can be preced either
by a space, like this
 This is an indented paragraph

or by a ":", like this:
:This is another indented paragraph

Indentation can be increased by adding more ":"s, like this,
for instance:
::This is indented even more

A line followed by "\\" forces a new line (same as space at
the beginning of a line)

 * Bullet lists are easy too; just add a space and an asterics
at the beginning of a line
 1. Numbers; just add a space and a "1. " (1 and period,
followed by a space); works with Roman numerals and
letters as well

Headers or Headings work like this
=Header 1=
==Header 2==
===Header 3===
====Header 4====
=====Header 5=====

Hidden Comment

Definitions work like this:
;ConnectedText:Personal Wiki System

---- Four hyphens make a line

adding three brackets before and after some text will show it
as plain text without formatting; like this:
{{{
Plain text or code
}}}

Character Formatting:

Italics, enclose the word(s) with "//": //Words in talics//

Bold, enclose the word(s) with "**": **Bold words**

Underlined, enclose the words with "__": __Underlined__

Strikethrough, enclose the words with "--": --Strikethrough--

Highlight: %%class=highlite%%Highlight%%%%

Colors: %%red%%Red%%%% or %%blue%%Blue%%%%,
other colors work as well

:
Links

Here is a ConnectedText Link to another topic: [[Another
topic]]; with an alias: [[Another topic|Next]]

Here is a ConnectedText Link to a Website:
[[$URL:http://www.connectedtext.com]]

Here is a ConnectedText Link to an email address:
[[$EMAIL:connectedtext@gmail.com]]

Here is a ConnectedText Link to a File:
[[$File:C:\Readme.txt]]

Here is a link to a picture or movie: [[$IMG:Trial.bmp]]
[[$MOVIE:trial.swf]]

To include a topic in another topic enclose it in double
Brackets, like this:
((Topic))

Simple Tables:

	Header		Header		Right	
	Cell		Cell		$10	
	Cell		Cell		$20	

Note: Look in the Welcome Project to get help on making
fancier Tables

Other Nifty Markup:

[[$CATEGORY:ConnectedText]] creates a category called
"ConnectedText"

[[$ASK:Topics]] ==> Inline query that asks for "Topics";
switch [[$ASK:Topics|Index]] gives you a list; other switches
are available

[[$RELATED:Other topic]] shoew that "other topic is related
to this topic

[[$CSS:MyStyle]] assign a special style sheet to a topic

[[$GRAPH:Currenttopic]] include a graph of the connections
of currenttopic to other topics

[[$NOTOC:]] suppresses Table of Contents

[[$BUTTON:PREV_TOPIC]] Makes a button that takes you
to the previous topic; several other buttons are available

[[$SCRIPT:Bullets.py]] includes a button for script on a page
so that you can run it

Properties and Attributes:

You can assign a property to a topic, like this
[[$PR:Status:=OK]]

An attribute is assigned as follows:
[[population:=3,993,933]]

Some other commands relating to properties and attributes:

[[$CROSS:]] ==> Include cross reference of a property

[[$NOCROSS:]] ==> suppress cross reference of a property

[[$INFOBOX:]] ==> Build topic's infobox

[[$SUMMARY:]] create tables relating topics to their
properties; see Welcome Project for further instructions
